ABSTRACT

The 1979-80 results of a building utilization study of Toledo, Ohio, public elementary schools are presented in this report. An evaluation instrument created for the study provided a means of ranking the schools in each of eight general areas: educational adequacy, operating costs, current and projected enrollment, environment, alternate use, modernization potential, capacity, and traffic and safety. Space, sanitation, utility and special services facilities were assessed to determine each school's compliance with accepted standards for educational adequacy. School ratings for modernization potential considered such factors as the age, condition and usage of the structure, aesthetics, renovation complexity, code compliance and access for handicapped. Information is recorded in the form of tables, graphs and charts. (JCD)

TOLEDO PUBLIC SCHOOLS
BUILDING UTILIZATION STUDY

As a result of recommendations made to the Toledo Board of Education in the CCEG report, and due to a recent decline in student enrollment, the Toledo Public School system has conducted a building utilization study.

This study was undertaken by Ray McNeill under the direction of Hugh Caumartin, acting assistant superintendent for Administrative Services, and assisted by Craig Cotner, assistant director, Urban Pilot Project. Much additional time and information were contributed to the study by Joe Coley, manager, Business Affairs and Financial Services; John Matheny, assistant business manager; William Lehrer, executive director, Elementary Education; Ken Morris, executive director, Secondary Education; Barbara Washington and Tom Bollin, supervisors of elementary principals; Art Just; Robert Pearson and Dave Coon.

As a result of discussions and an extensive review of the available literature, a building utilization instrument was created. This survey tool enabled us to rank the schools based on the total score achieved in eight general categories. A list of those categories and a brief explanation of each one follows:

	CATEGORY	POINTS
1.	Educational Adequacy	20
2.	Operating Costs	20
3.	Enrollment, current and projected	20
4.	Environment	10
5.	Alternate Use	10
6.	Modernization Potential	8
7.	Capacity	8
8.	Traffic and Safety	4
	TOTAL	100

1. Educational Adequacy

This portion assessed the ability of the facility to meet the requirements of a good instructional program. The language used is taken primarily from the Ohio Minimum Standards for Schools.

UD021790

3. Enrollment, current and projected

This item deals with the relationship of enrollment to capacity. Figures used are for both current and projected enrollment. Capacity was determined by multiplying the number of classrooms in a building by 25. Projections were based on a school's retention rate for the past three years.

4. Environmental Impact

This section evaluates the environment in the area adjacent to the school. Factors rated included noise and air pollution, play area, lighting and security, neighborhood blight and flooding.

5. Alternate Use

This portion analyses the possibility of non-school use for the present school facilities. This includes a study of location, zoning, and the degree of interest in the building and/or site expressed by others.

6. Modernization Potential

This is a rating of schools based on modernization potential. Factors considered include: age and general condition of the structure, renovation complexity and code compliance, and an evaluation of the school's current access for the physically handicapped.

7. Capacity

Credit is awarded if a school meets or exceeds the optimum size generally recommended.

8. Traffic and Safety

This section rates schools based on traffic and other hazards, and the degree to which those hazards are controlled. Also included is an evaluation of those factors which make a building safe.

The process to complete the study involved numerous individuals and four phases.

The initial phase was a data gathering process. The Toledo Public Schools' business department supplied the necessary information for the Operating Cost and Alternate Use categories. The Toledo Public Schools' engineering staff supplied the data required to complete the Environmental Impact, Modernization Potential, and Traffic and Safety categories. Finally, the Building Utilization Staff gathered the facts for the Capacity category along with each school's current and five year projected enrollment.

The second phase of the study involved the building Utilization Staff in a simple, but tedious task, of transferring the above information to the respective pages of each school's survey instrument.

The third, and possibly the most important phase, entailed meetings with each of the seventy five (75) building principals. During these meetings each principal reviewed and evaluated the information which concerned his/her building. They then supplied the information necessary to complete the Educational Adequacy and Enrollment portions of the survey and participated in the final scoring of his/her school.

It should also be noted that on the survey instrument provisions were made for indicating any special circumstances that might presently affect, or soon affect, a specific building. This information was provided by building principals, the business department, the system's engineers, and the Lucas County Planning Commission. The following are examples of circumstances that were noted: present and possible future housing growth and the need for additional major expenditures for such items as boilers, windows, roofs, flood control, plumbing, and electrical work.

The fourth phase of the survey required that the Building Utilization Staff rank each school according to their total score, and that the Staff put all of the newly gathered information into detailed chart and graph form. All rankings, charts, and graphs for either elementary buildings or junior and senior high buildings are included in this report.

A more detailed study will be done involving those schools ranked below a cut off line, yet to be determined. This additional study could formulate suggestions to improve the rating of a particular school or schools.

With slight modification, the present survey instrument could be used in an annual review of the school facilities.

SCHOOL RANKINGS BY TOTALING MODERNIZATION POTENTIAL, ENROLLMENT, AND OPERATING COST

The following school rankings are based on a total of three categories: Modernization Potential, Enrollment, and Operating Cost. These rankings were done due to information gained from Toledo Public School's 1979 Needs Assessment. Those surveyed indicated that the above three items were the most important factors to consider when studying possible school closures.

b. General Convenience	GOOD - 0	MODERATE - 4	POOR- 8
TOTAL	10	52	100

NOTES:

1. Expressed Interest - this factor has to do with whether or not a degree of interest has been expressed by outside parties in the particular property. If it is assessed that a relatively high degree of interest has been expressed in the property, an indication that an alternative use for the property can easily be found, then 0 points would be awarded. If a moderate of interest has been expressed then 20 points would be awarded, etc.

2. The Zoning factor or the possibility of zoning has to do with whether or not the property is zoned for uses other than school uses or if the property is assessed to have a high possibility of re-zoning. Some alternative uses may not require re-zoning, if this is the case then the zoning factor should be considered at the same time factor #1 expressed interest is considered.
